

# Борис Павлович Готтих

(16 августа 1932 г. - 25 марта 2018 г.)

25 марта 2018 г. на 86 году жизни скончался Заслуженный деятель науки РФ, профессор, доктор химических наук, заместитель начальника Отдела биологических наук РАН Борис Павлович Готтих.

Б.П. Готтих был одним из тех, кто вместе с В.А. Энгельгардтом стоял у истоков Института молекулярной биологии РАН, где в течение многих лет руководил лабораторией и был сначала учёным секретарём, а затем – заместителем директора по научной работе. Много лет он трудился в Отделении биологических наук Российской академии наук и работал аппарате Президиума РАН.

Молодой 28-летний кандидат химических наук Борис Павлович Готтих, выпускник Химфака МГУ был отличным учёным секретарём, т.к. по своей природе был собранным и организованным человеком. Почти весь 1972 г. Б. П. Готтих провёл в аппарате ЦК КПСС, работая над созданием первого постановления ЦК КПСС и Совмина СССР о развитии в СССР молекулярной биологии, а главное – над подробным Приложением к этой программе исследований по всей стране, с перечислением всех институтов, лабораторий и даже групп, и их руководителей, разделов работы и конкретных «заданий». Это была огромная и, в условиях тогдашней полной централизации управления, – очень важная для развития науки в СССР деятельность. Б. П. Готтих хорошо справился с ней. Конечно, он создавал программу не один, и отнюдь не считался главным её автором, но он был

ключевым исполнителем подготовки этого текста, особенно – подробного Приложения. По мнению многих это была образцово составленная и удобная, в отношении финансирования и управления, программа.

Институт Теоретической и Экспериментальной Биофизики РАН выражает глубокие соболезнования по поводу кончины Бориса Павловича Готтиха.
